

VEIL DARK POOL

SHIELDED PERP EXECUTION ON SOLANA

The on-chain equivalent of what NYSE already operates.

Solana Frontier Hackathon 2026

LIVE ON DEVNET

80 TESTS PASSING

PRODUCTION INFRA

// WHY NOW

\$7T/MONTH IN PERPS, ZERO DARK POOLS

\$7T

MONTHLY PERP VOLUME

30-50%

TRADFI EQUITY VIA DARK POOLS

\$0

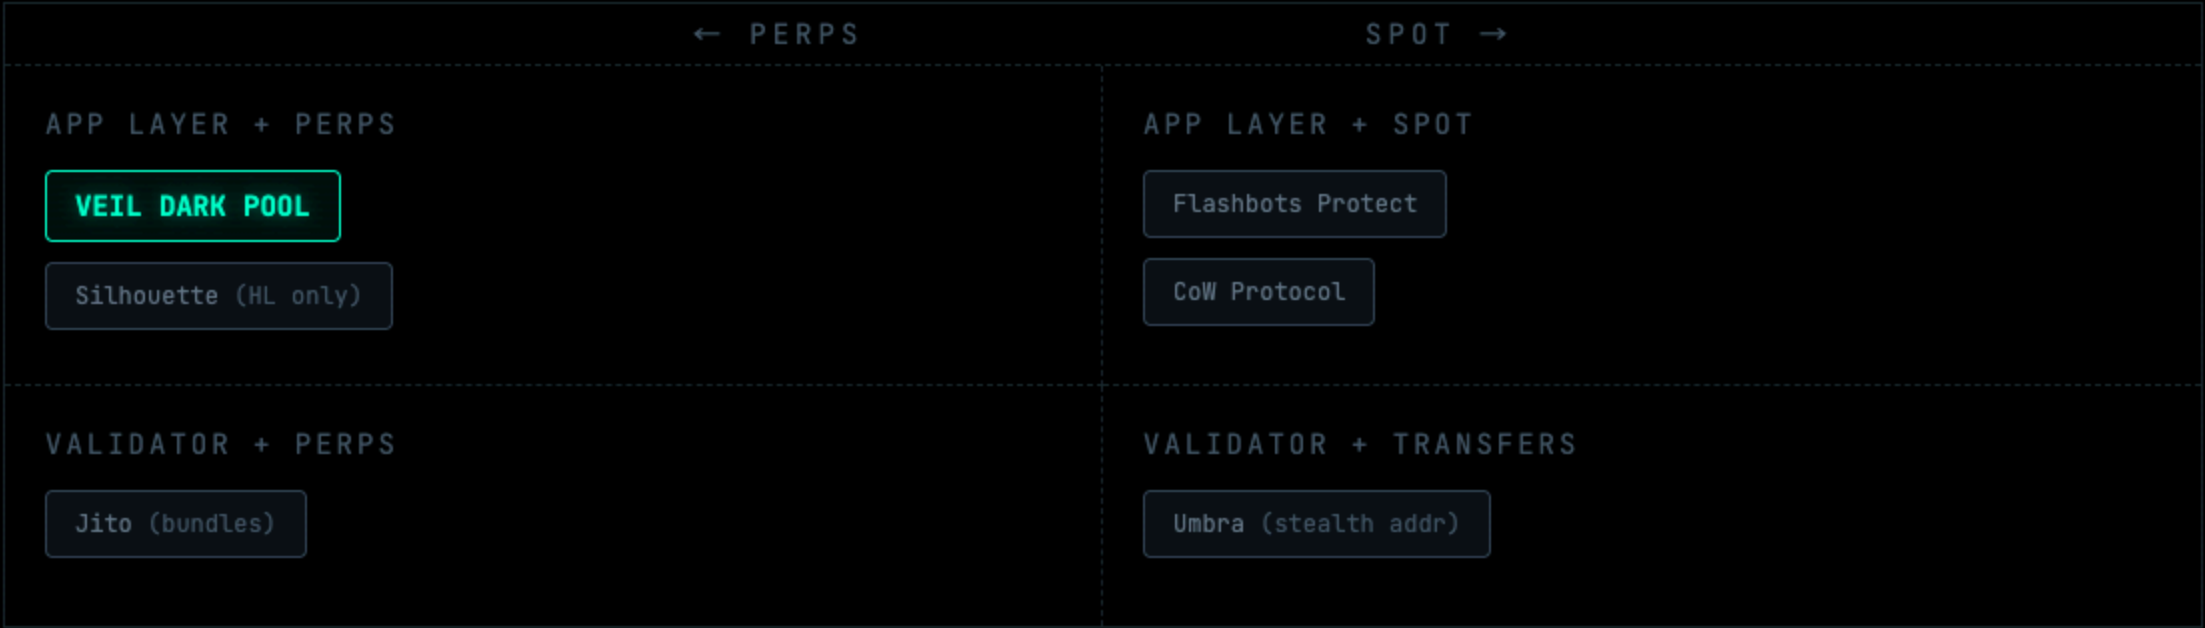

DARK POOL VOLUME ON SOLANA

Every large perp trade on Solana gets **front-run**, **sandwiched**, or **copied**. Institutional capital won't enter until execution is private.

Solana now has **multiple mature perp venues** (Drift, Jupiter Perps, Phoenix). The liquidity is here. The privacy layer is missing.

// LANDSCAPE

NO ONE OCCUPIES THIS POSITION

Application-layer privacy for perps on Solana – the intersection no one occupies.

// LEGAL CLARITY

CONFIDENTIALITY ≠ ANONYMITY

TORNADO CASH

Hides	Who you are
Duration	Permanent
Audit trail	None
Status	OFAC sanctioned

VEIL DARK POOL

Hides	What you trade
Duration	Until execution only
Audit trail	DarkTradeRecord on-chain
Status	SEC-regulated in TradFi

NYSE, NASDAQ, every major broker operates dark pools under **Reg ATS**. We're bringing a regulated, proven model on-chain.

// WHY SOLANA

COMPOSABILITY IS THE MOAT

SILHOUETTE ON HYPERLIQUID

Settlement	HyperCore only
DEX options	1 (Hyperliquid)
CPI composability	None
DeFi integration	Bridge required
Funding	\$3M raised

VEIL ON SOLANA

Settlement	Drift, Jupiter, Phoenix
DEX options	3+ venues
CPI composability	Atomic transactions
DeFi integration	Native (Kamino, Marginfi...)
Stage	Devnet, seeking funding

Silhouette is locked to one venue. Veil settles on **any Solana DEX** – composability that Hyperliquid structurally cannot offer.

// GO-TO-MARKET

VAULT OPERATORS FIRST, INSTITUTIONS NEXT

- Phase 1: We are our own first customer

Yogi (Drift mainnet) and Kodiak (Hyperliquid mainnet) lose money on every visible rebalance. Route through Veil Dark Pool → instant MEV savings.

- Phase 2: Other vault operators

Liminal (\$30M TVL), Harmonix (\$6M), Reflect, GLAM – every vault on Solana has the same MEV problem. Dark pool API integration = 1 function call.

- Phase 3: Institutional desks

Trading firms, market makers, family offices. Dark pools are table stakes for institutional flow. TEE attestation (v1) unlocks trust requirements.

- Phase 4: Protocol integration

Any Solana protocol can CPI into Veil for private execution. Distribution through composability – same playbook as Jupiter.

// REVENUE

VOLUME-BASED, NOT CAPITAL-BASED

REVENUE STREAMS

Dark pool matching fees	2-5 bps per matched trade
Fallback routing fees	1 bps per routed order
Premium tiers (M-of-N threshold encryption)	Institutional pricing
API access for vault operators	Monthly subscription

PROVEN IN TRADFI

IEX (dark pool exchange)	\$300M+ annual revenue
Liquidnet (institutional dark pool)	Acquired for \$700M
Fee model	Same structure – bps on matched volume
Scaling	Revenue grows with volume, not capital

In traditional markets, Robinhood is worth more than Nasdaq. Value accrues to the execution layer above exchanges.

// TRACTION

NOT STARTING FROM ZERO

Built in 1 week on top of 4+ months of production infrastructure.

// TEAM

BUILDER WITH PRODUCTION TRACK RECORD

@PSYTO — SOLO FOUNDER, TOKYO

Yogi	Funding rate vault, live on Drift mainnet
Kodiak	Delta-neutral vault, live on Hyperliquid mainnet
Veil	Privacy infra suite — 6 apps, npm published, QuickNode recognition
Fabrknt	29 infrastructure packages powering all products
Experience	Perps execution across Drift, Jupiter, Hyperliquid

I run live perp vaults that **lose money to MEV on every rebalance**. I'm building the dark pool because **I need it myself**.

This isn't a hackathon project I'll abandon. It's the flagship product for an existing privacy infrastructure business.

// THE PIVOT

MENTOR FEEDBACK CHANGED EVERYTHING

- Weeks 1-2: Built Syntx – cross-venue perp DEX. 5 venue adapters, 15 instructions, full frontend.

- "You're competing with Drift and Jupiter. You have no edge."

Users asked: "Why would I use this instead of Drift?" – no good answer.

- **Week 3:** Pivoted to Veil Dark Pool. Combined proven privacy infra (Veil) + proven perps execution (Yogi/Kodiak) → product the ecosystem actually needs.

Built in 1 week. 80 tests. Deployed to devnet. E2E passing.

Syntx's VenueAdapter infrastructure became the settlement layer inside Veil Dark Pool. Nothing was wasted – we pivoted the product, not the technology.

// THE ASK

WHAT WE NEED TO SHIP

IMMEDIATE (COLOSSEUM ACCELERATOR)

Security audit	\$50-100K
TEE + QuickNode Streams (v1)	3 months
Mainnet deployment	Post-audit
First vault integration	Yogi + Kodiak

WHAT WE BRING

Production privacy infra	✓
Live mainnet vaults	✓
Working dark pool on devnet	✓
First customer (ourselves)	✓
Novel primitive (first on Solana)	✓

Colosseum backs teams building the next wave of Solana infrastructure. **Dark pools are that infrastructure.**

VEIL DARK POOL

Dark pools handle half of institutional equity volume for a reason.
Solana perps deserve the same infrastructure.

First of its kind. Built on production systems. Ready for mainnet.
